

### Precision built servo press delivering manufacturing flexibility to our Stamping Department!

Starting in December 2017 Ultra Tool & Manufacturing enters a new era in metal forming with the installation of a NEW *Minster Servo FX2-300*.

This servo press features programmable stroke control for maximum manufacturing flexibility.

#### PROGRAMMABLE STROKE OPTIONS

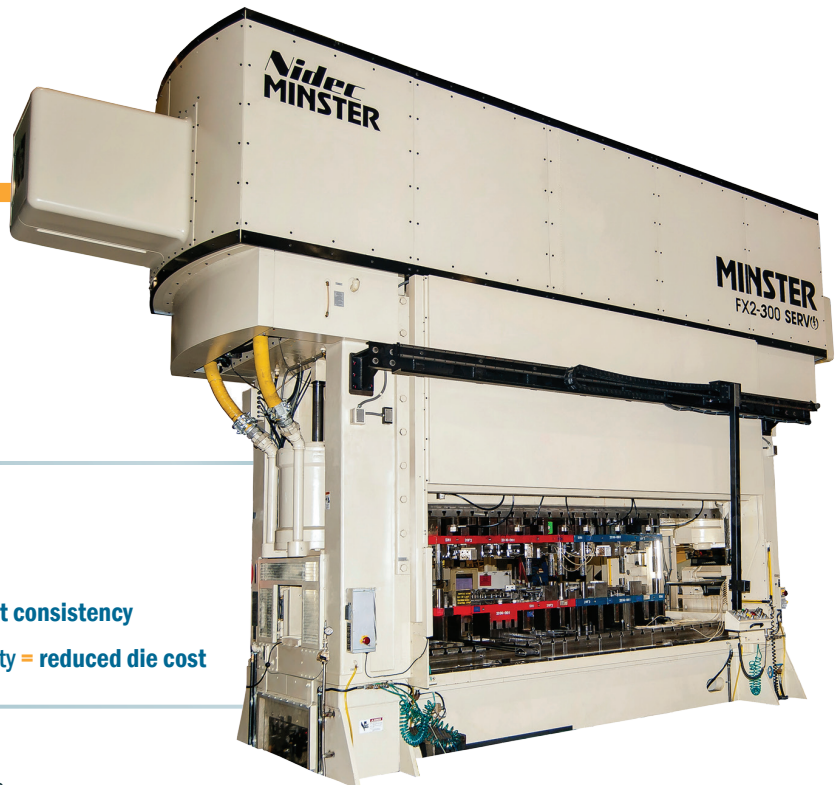

Shorter strokes = more parts per hour = lower part cost

Dwells during the stroke = allows material to flow = increased part consistency

Changes in stroke speed during a revolution = increased formability = reduced die cost

Minster's FX2 Servo features unique liquid cooling technology leading to a longer motor life and less heat transfer to the press for a more stable production environment.

The durability and flexibility of a Minster Servo Press are unmatched and will allow us to continuously improve our manufacturing capabilities as customers specifications are ever changing and increasing in complexity. In addition, the servo motor and drive technology is produced by Siemens a global leader in electric motors.

Continually reinvesting into our facilities, people and equipment give us the opportunity to dedicate more time and energy to each customer's part from design to finished product. We believe in **Forming Relationships that Work** so that we can continue to deliver excellent customer service and high-quality products on-time.

### MINSTER FX2-300 SERVO PRESS 330-ton press (specs)

- **Tonnage**, 330 (US tons)
- **Bed Size**, 48" x 96"
- **Max SPM**, 51
- **Stroke**, 11.81"
- **Servo Feed CWP** 30" wide max material
- **Fully Programmable Stroke Profile**
- **Full Tonnage Throughout Stroke**
